

Work Experience

YELP **Senior Software Security Engineer**, *Remote*, August 2024 - Present.

Engineer on the Incident Detection and Response Team

- Security News Analyzer to notify on items of interest, improving our security response time
- Transition company to using Managed Chrome Browsers to enable better reporting and extension management
- Project Proposals
- Updates to ticket automation
- Investigate reported and detected Phishing attempts
- Collaborating with XFN to scope out project work
- Proposing improvements to team processes (Docathon)
- Expanding team processes to include other teams/groups
- Google Admin email investigations and quarantine
- Crowdstrike Falcon
- Managing and organizing team events
- Design a system refactor of our incident response platform
- Organize our teams backlog and created a new process for task structuring in the teams Jira project
- Initiated a new XFN partnership
- Splunk Dashboarding and Calculating the time estimates for incident responses
- Defining and Creation of new PHISH Training
- Dashboard for Metrics around various team processes
- Running Security incidents, creation of tasks, and coordinating the investigation across a number of engineers

META **Software Engineer**, *Remote*, July 2022 - March 2024.

Engineer on the Reality Labs Account Integrity team focusing on compromised account detection, remediation, prevention, and suspension.

- Orchestrated seamless on-call asset allocations across multiple teams, optimizing operational efficiency
- Implemented robust dashboards, monitoring systems, and alerts using *Presto*, *Scuba*, and *Hive*, enhancing the team's ability to track feature metrics
- Designed and executed a user-friendly notification opt-out flow using *React*, *Hack*, *JSX*, *GraphQL* and *TAO* while ensuring high test coverage with various end-to-end and unit tests
- Identified gaps in integrity-based notifications and worked with XFNs to design and implement new solutions
- Updated user actions, incorporating rate limits based on vulnerability concerns in *Hack*, enhancing system security
- Facilitated the onboarding of XFNs to team projects and resources, fostering collaboration and knowledge-sharing
- Actively participated in on-call rotation and SEV incident follow-ups, contributing to rapid issue resolution and system stability

YELP **Software Engineer**, *Remote*, May 2021 - June 2022.

Engineer on the Billing Infrastructure Team implementing new billing systems/flows and monitoring billing integrity validation.

- Led a project to implement new billing system flows using *Python*
- Utilized *Jupyter Notebook* for feature generation in *Pyspark*, contributing to improved data analysis and processing
- Designed and implemented new *Splunk* dashboards, enhancing the teams' monitoring and investigation capabilities

IBM **Software Developer**, *Markham, Ontario*, May 2019 - May 2021.

Developer working on DB2, DB2 Graph, and Area 631

- Investigated customer reported defects/issues for potential solutions
- Restructured existing code base to simplify future changes
- Increased test coverage across various features using *Python Pytest*
- Worked on *Watson Studios* to create *Jupyter Notebooks* using *Pyspark*, *Pandas*, and *Numpy*
- Created APIs and scheduled daily and weekly jobs using IBM Cloud Functions
- Collaborated with a small team to build a POC application in the internal Area 631 incubator

Projects

Machine Learning for Cybersecurity, Malicious Netflow Classification,

Python, Pandas, Numpy, Docker, Kafka, scikit-learn, Jupyter Notebook.

Worked on a team to develop a new highly configurable machine learning framework for detecting malicious netflow traffic. This framework handles the preprocessing, discretization, training and testing to classify network data as malicious or benign based on a number of generated features.

Education

Google Cybersecurity Certificate, *Coursera*.

Honours Bachelor of Science in Computer Science, Data Science Option, *University of Ottawa*.
